Decorative Shutter - Measuring for Pricing November 2006

Measuring for Pricing

Decorative Shutters:

We suggest that the shutter size be 4" larger than the window opening, 2" on all sides, this depends on the look you want to achieve.

Measuring & calculations for pricing:

- 1 Measure the width & height of the window
- 2 Add 4" to the width & height

Example: 36" (wide) x 48" (high) = 40" x 52" = 2,080 square inches (divide by 144 to get square feet) /144 = 14.45 square feet (.01 to .49 round up to .5 and .51 to .99 round up to 1) 14.5 square feet x price / square feet = \$ / shutter (see minimum sq ft price)

Zip code is required for shipping & handling.

Please call if you have problems or questions.
